

# SELF-CLEANING WINDOWS & CONSERVATORIES

Your new windows have been especially treated at our factory for your convenience with a protective marine grade polymer coating with self cleaning properties from **RAIN RACER™**

Self - Cleaning Windows ? How does it work ? **RAIN RACER™** harnesses nature

To understand why flowers always look so clean and fresh. Just look how rain water beads up on plants, **Simple things work !** Rain water on windows treated with **RAIN RACER™** will trap dirt in the water beads and roll it off of the glass. Nothing looks more beautiful than looking through optically clear clean glass.

## Optically clear smart glass

**RAIN RACER™** the protective polymer coating that is virtually self cleaning, stain resistant and has a light scratch resistance due to it's lubricity. The unique coating will not be removed should extra cleaning be required.

**RAIN RACER™** stays cleaner for longer than any other type of self - cleaning products without the aid of rain or washing. You can see the difference how **RAIN RACER™** reduces the static build up of dust and dirt on windows. Whether you are living or working on a main road, sea front, dusty lane, near a railway line etc. It will stop algae from growing on glass conservatories and skylights. Brilliant on Georgian windows and leaded lights.

**Everybody likes clean windows - Nobody likes cleaning them !**

**Environmentally friendly** no chemicals required, occasionally washing with clean water restores coating. Finger marks especially on patio doors - you can mist over with clean water from a house plant spray and wipe dry with a tissue/kitchen roll or just wipe off with a clean damp cloth (**RAIN RACER™** protective coating is chemically inert and can not be removed with chemical cleaners also it is marine safe).

**SPEED CLEAN™** - with - **RAIN RACER™**

**RAIN RACER™** produces a **speed clean™** surface making any extra cleaning easier, effortless and faster than on unprotected glass. Should your windows become heavily soiled - washing with soapy water then rising off with clean water will restore and reinvigorate coating.

### Nano-Technology guarantee

**RAIN RACER™** will not chip, crack, peel or discolour with sunlight. For best **self - cleaning** properties apply our rejuvenation kit on a fine dry day approximately 3 - 4 years after your windows have been installed. The rejuvenation kit is optically clear and easy to apply (it is simply wiped on), Ideal for D.I.Y.
